

Week 4 (5/11/20 to 5/18/20)

First watch these videos as a refresher of how to calculate the surface area of a composite figure and volume and surface area of a three-dimensional geometric shape, then practice what you have learned by working on the IXL assignment.

Here are the videos for geometry and measurement.

- [Area of composite figures](#)
- [Volume of 3D shapes](#)
- [Surface Area of 3D shapes](#)
- [Another video for area of a composite figure.](#)
- [Formula sheet](#)

In Spanish: [Finding circumference of a circle](#)

- Remember these are refreshers; if you feel comfortable completing the IXL, you do not have to watch the entire videos:
- To practice what we have learned, please go to Geometry section of the IXL (not the 8th grade) and complete IXLs: S.1,3,4,7,8,9.
